Images

When a new language is set active, Ektron CMS100 calls the images that are being used from a different directory. For example, when you have English(US) set active, the images are called from \expscripts\images\english. But when another language is set active like German, the images will now be called from \expscripts\images\german.

The language translation program doesn't do this for you, you must go to the location and make all the changes manually by creating the directory and images.

NOTE You can copy all the images out of the English folder into the foreign language directory, and just modify those images to correspond to the proper language.
