## Product recommendations

Episerver Personalization is the most advanced personalization tool set on the market. At its heart is the T3 platform, a third-generation, proven technology that delivers consistently outstanding results. Episerver Personalization is easy to implement on every page of your website, working to maximize the impact of personalized product recommendations.

Each product recommendations widget on your site is configured in the Episerver back-end according to a pre-agreed strategy. Each widget can have its own strategy depending on the identified KPIs (key performance indicators) for personalization. If there is more than one widget served on the same page, each of the widgets also can have a different strategy.

A **strategy** comprises a number of algorithms, developed by Episerver's data scientists and machine learning experts. The algorithms are applied to each widget in a stack formation. This means that the personalization engine looks at the visitor's behavior, and tries to return a product recommendation matching the first algorithm in the stack. If the system is unable to identify a suitable product, it looks at the next algorithm in the stack, and so on, until the required number of products for this widget are returned.

Episerver's [Recommendations interface](#) lets you refine the product recommendations generated by Episerver algorithms, or override Episerver product recommendations to execute specific merchandising campaigns in accordance with your overall site strategies and targets.

You can control merchandising rules in the Episerver for the Personalization Portal, switching them on/off and changing them in real time.

## Recommendations interface

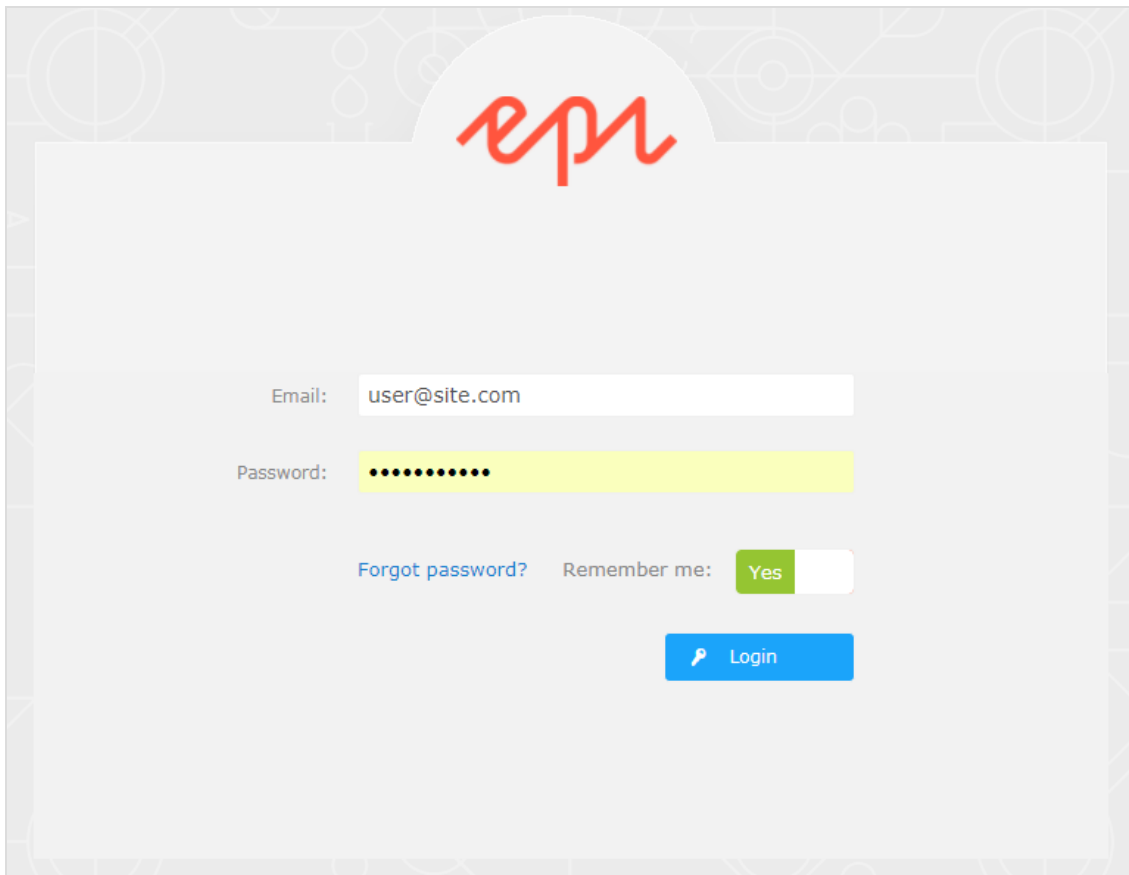

The Recommendations interface is available in the Episerver for the Personalization Portal.

1. Access the Episerver for the Personalization Portal at the URL provided to you when your user account was created. This will be one of the following URLs:

<https://smartmanager.peerius.com/admin>

<https://smartmanager.peerius.episerver.net/admin>

2. Log in to the Episerver for the Personalization Portal with your provided credentials. If you do not have your login details, contact [developersupport@episerver.com](mailto:developersupport@episerver.com)

3. Select the **Recommendations** tab in the navigation bar. In the Recommendations interface, you can create new merchandising campaigns, and view or edit the campaigns that you have already set up.

The screenshot shows the Episerver Recommendations interface. At the top, there is a navigation bar with 'Reports', 'Recommendations', 'Mail', 'Triggers', and 'Promote' menus, and an 'Account' button. Below this is a sub-navigation bar with 'Campaigns', 'New campaign', and 'Product sets' tabs. The main heading is 'Manage your Recommendations merchandising campaigns' with a 'Create a new campaign' button. A search bar is present below the heading. The main content is a table with the following data:

Campaign name	Page type	Widget alias	Start date	End date	Created date	Modified date	Edit - Status - Delete - Copy
<a href="#">Front Page Strategy</a>	Product page	productwidget1	Aug 31, 2017	-	-	-	
<a href="#">Reco Slider (Demo)</a>	Product page	productwidget1	Oct 09, 2018	-	-	-	
<a href="#">Test-Campaign</a>	Product page	productwidget1	Feb 12, 2019	-	Feb 12, 2019	Feb 12, 2019	

4. Click **Create a new campaign** to start setting up a new campaign. See Setting up a Mail campaign (in the Mail user guide) or [Setting up a merchandising campaign](#).
5. To edit an existing campaign, click the campaign name or **Edit** next to it.

## Setting up a merchandising campaign

To create a new merchandising campaign, click **Create a new campaign** from the **Recommendations** overview screen, or select the **Recommendations > New campaign** tab. The campaign editing screen appears. The set-up process involves the following steps:

1. [Configuring main campaign details](#)
2. [Defining master rules](#)
3. [Defining product recommendation rules](#)
4. [Applying exclusions](#)
5. [Setting up activation and preview](#)

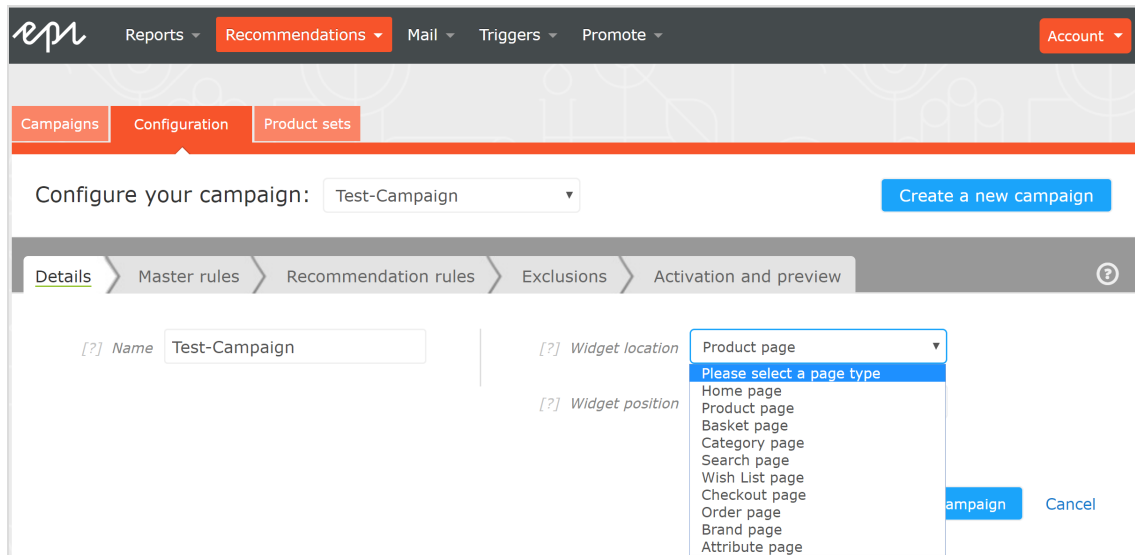

### Configuring main campaign details

In the **Details** tab, configure the main details of the merchandising campaign: **name**, **location** and **position** of the widget to which the merchandising campaign is applied.

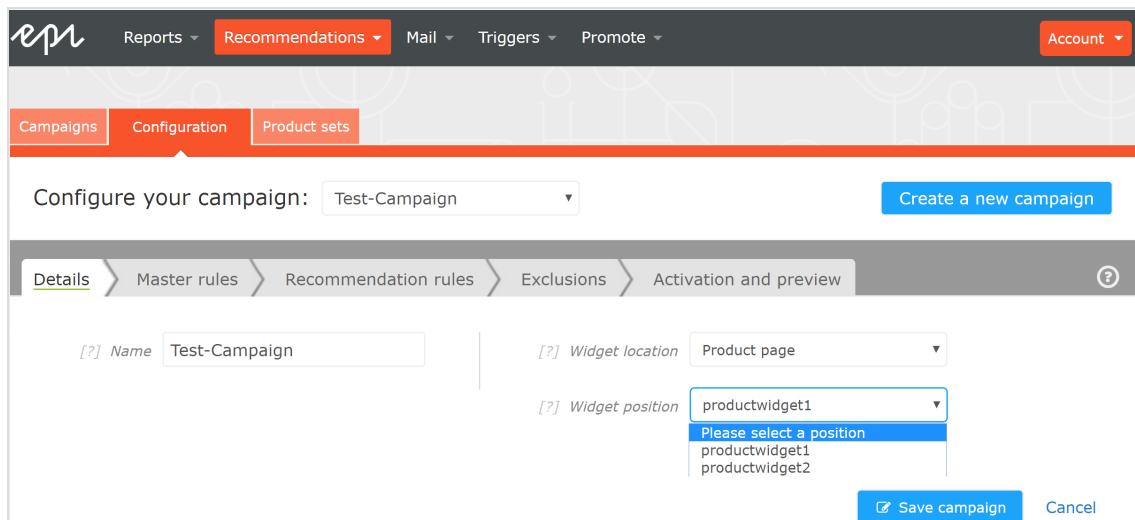

1. Enter a name for the campaign you are creating, such as *Product Page Promotion* or *Brand Rule*.

2. Select the widget location; this is the page type where the target widget of the Merchandising campaign is located.

3. Select the widget you want this campaign to be applied to. The widget position drop-down lists available widgets on the selected destination page.

## Defining master rules

**Tip:** Setting up **Master rules** is optional.

Master rules let you refine the merchandising campaign effects to pages, products, or visitors. If you do not specify any master rules, the merchandising rules are applied globally across the selected widget for a campaign. If you apply a Master rule, it must be satisfied to apply product recommendation rules.

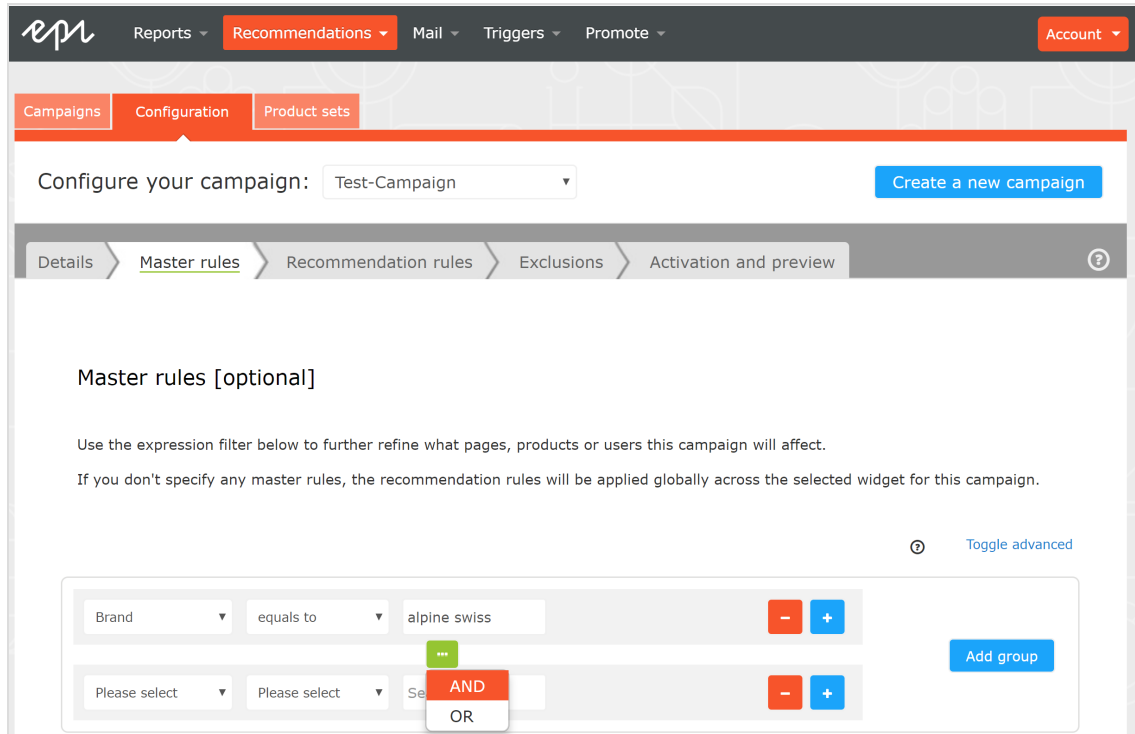

Examples of **Master rules** frequently used:

Use case	Master rule	Recommendation rule
Recommend only products from the same brand as the current product being viewed.	Brand <b>equals to</b> and type the brand name in the Search field.	Brand <b>equals to</b> and type the brand name in the Search field.
Recommend a specific product SKU when a specific product is viewed (i.e. override with a hand-picked product).	Ref Codes <b>equals to</b> and type the product SKU.	Ref Codes <b>equals to</b> and type the product SKU.
Only recommend products above a specific price when a user is viewing a product above a certain price.	Sale Price <b>greater than or equals</b> and type in the price (such as <b>25</b> ).	Sale Price <b>greater than or equals</b> and type in the price (such as <b>25</b> ).
Do not recommend discounted products when a user is viewing a full priced product.	Discount <b>equals to</b> False.	Discount <b>equals to</b> False.

1. To add a Master rule, select the product attribute for your products from the drop-down list. The attributes are based on the product feed, plus a few attributes that Episerver creates by default. If you do not see the attribute that you want, add it to your product feed.
2. Select the condition you want in your rule. For attributes that have a text value, such as **Color** or **Brand**, choose between **equals to** or **NOT equals to**. For attributes with a numeric value, such as **Sale price** or **Unit price**, you also can use comparison operators like **greater than** or **less than**.
3. In the text field, enter the value of the attribute to be evaluated. For most attributes, a drop-down list shows values when you click in the text field. You also can start typing in the box to filter the results. To select a value, click on it. Numeric values (such as prices) do not have a pre-populated list; enter the value manually.

The screenshot shows the Episerver Recommendations configuration interface. At the top, there is a navigation bar with 'Reports', 'Recommendations', 'Mail', 'Triggers', and 'Promote' menus, and an 'Account' button. Below this, there are tabs for 'Campaigns', 'Configuration', and 'Product sets'. The main heading is 'Configure your campaign:' followed by a dropdown menu set to 'Test-Campaign' and a 'Create a new campaign' button. A breadcrumb trail shows 'Details' > 'Master rules' > 'Recommendation rules' > 'Exclusions' > 'Activation and preview'. The 'Master rules [optional]' section contains instructions: 'Use the expression filter below to further refine what pages, products or users this campaign will affect. If you don't specify any master rules, the recommendation rules will be applied globally across the selected widget for this campaign.' There is a 'Toggle advanced' link. The main configuration area shows a dropdown for 'Brand', an operator 'equals to', and a text input 'A'. A dropdown menu is open below 'A', listing 'alpine swiss', 'amerileather', 'aurielle-carryland', and 'Last viewed'. To the right of the input are minus and plus buttons, and an 'Add group' button. At the bottom right, there are 'Save campaign' and 'Cancel' buttons. A copyright notice '© 2019 Episerver' is visible in the bottom left corner.

**Note:** You can add multiple rules by clicking the **Add group** or **+**. When using multiple rules you can choose how you want them to interact by setting the **AND** or **OR** operator.

**Note:** To remove a rule, click minus - next to it.

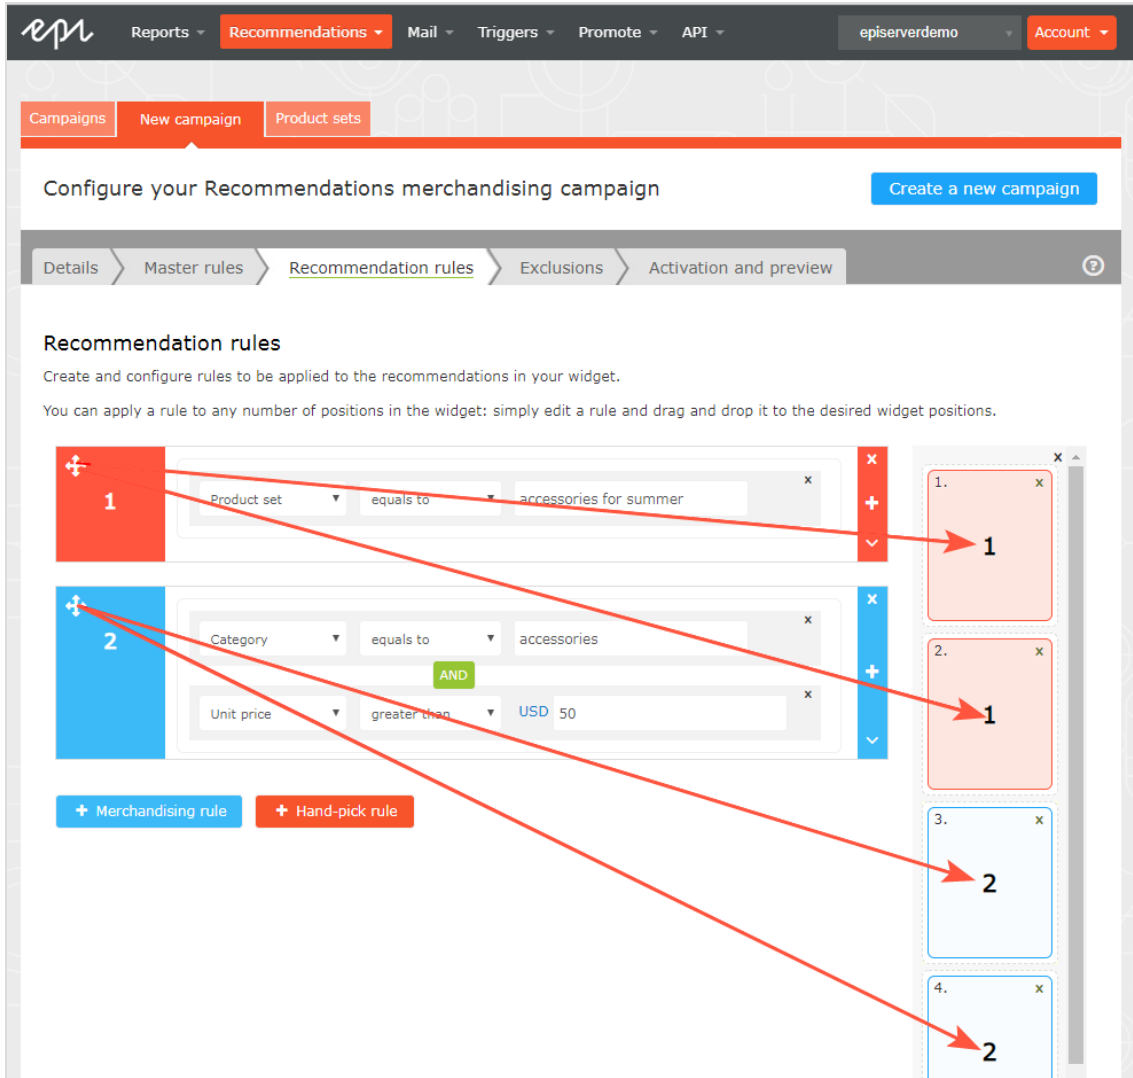

## Defining product recommendation rules

Create and configure the rules to be applied to the product recommendations shown in your widget. You can apply a rule to positions in the widget. You also can create different rules for each position, or leave a position blank to show the default output of the Episerver algorithms.

The screenshot shows the Episerver Recommendations configuration interface. The top navigation bar includes 'Reports', 'Recommendations', 'Mail', 'Triggers', 'Promote', 'API', 'episerverdemo', and 'Account'. The sub-navigation bar has 'Campaigns', 'New campaign', and 'Product sets'. The main heading is 'Configure your Recommendations merchandising campaign' with a 'Create a new campaign' button. The breadcrumb trail is 'Details > Master rules > Recommendation rules > Exclusions > Activation and preview'. The 'Recommendation rules' section includes instructions: 'Create and configure rules to be applied to the recommendations in your widget. You can apply a rule to any number of positions in the widget: simply edit a rule and drag and drop it to the desired widget positions.' Two rules are shown: Rule 1 (red) with condition 'Product set equals to accessories for summer', and Rule 2 (blue) with conditions 'Category equals to accessories' and 'Unit price greater than USD 50' connected by an 'AND' operator. A vertical list on the right shows four slots for dragging rules into widget positions. At the bottom, there are buttons for '+ Merchandising rule' and '+ Hand-pick rule'.

- Click **Merchandising rule** to add another recommendation rule.
- Click **Hand-pick rule** to create a rule that creates a specific override to the recommendation rule when a specific product is viewed. For example, the rules in the previous image specify "product set equals accessories for summer."
- Use the drop-down fields to add the required criteria for the product recommendations in the same way as you would for a **Master rule**.
- You can add more than one criterion in the same rule by using **+**, and the **AND** and **OR** operators.
- After you finish setting up your rule, drag and drop the rule number to the required position in the widget, where you want it applied. The following image shows rule 1 applied to product position 1 and 2, and rule 2 applied to product position 3 and 4. You can apply the same rule to more than one product position. If

you want the same rule to apply to all products in a widget, click **Apply to all**.

- You can add more than one rule to the same merchandising campaign, if want to apply different rules to different positions in the same widget. For example, you can apply rules for the first product to have a sale price of **25.00** or more, the second product between **15.00** and **24.99**, and the third product under **15.00**. To add another rule, click +.

Details > Master rules > **Recommendation rules** > Exclusions > Activation and preview

### Recommendation rules

Create and configure rules to be applied to the recommendations in your widget.

You can apply a rule to any number of positions in the widget: simply edit a rule and drag and drop it to the desired widget positions.

+ Merchandising rule    + Hand-pick rule

- Click the currency code to select another currency code from the resulting menu.

- Click **Toggle Advanced** if you want to manually enter the coding.

The screenshot displays a rule configuration interface. On the left, a blue sidebar contains a plus icon and the number '2'. The main area shows two rule conditions stacked vertically. The first condition is 'Sale price' (dropdown) 'greater than or equal to' (dropdown) 'GBP 15.00' (input field). A green 'AND' button is between the two conditions. The second condition is 'Sale price' (dropdown) 'less than' (dropdown) 'GBP 25.00' (input field). Below these conditions, the generated query is shown: `(r.saleprice["GBP"]>="15.00" and r.saleprice["GBP"]<"25.00")`. A red circle highlights an upward arrow icon in the bottom right corner of the rule editor.

## Applying exclusions

**Tip:** Exclusions are optional.

This feature lets you specify products that you do not want to show in the widget specified in the merchandising campaign (in the **Details** tab). For example, you set up a product recommendation rule to show products from a specific brand – *BRAND I* – but there are some products from *BRAND I* that you actually do not want to show.

In the search field you can type a product SKU/refCode or title to find the product you want to exclude from recommendations. Click on the products in the results to add them to the exclusions list, and click **Finished** after you have added your exclusions.

The screenshot shows the Episerver Recommendations interface. The top navigation bar includes 'Reports', 'Recommendations', 'Mail', 'Triggers', 'Promote', and 'Account'. Below this, there are tabs for 'Campaigns', 'New campaign', and 'Product sets'. The main heading is 'Configure your Recommendations merchandising campaign' with a 'Create a new campaign' button. A breadcrumb trail shows 'Details' > 'Master rules' > 'Recommendation rules' > 'Exclusions' > 'Activation and preview'. The 'Exclusions' tab is active, titled 'Exclude products', with the instruction 'Specify any products that you don't wish to show in the recommendations.' Below this, it says 'Products to exclude from recommendations:' and shows three blue tags: 'White Shirt Product:123', 'Blue Shirt Product:234', and 'Denim Shirt Product:345'. A section labeled 'Product456' contains a 'Finished' status and a 'Printed Shirt' product. A 'Clear all' link is next to 'Finished'. At the bottom right, there are 'Save campaign' and 'Cancel' buttons. The footer shows '© 2017 Episerver'.

## Activating and previewing

In the **Activation and Preview** tab, specify a start and end date for your merchandising campaign, select days of the week to run the campaign, and preview the campaign using a product or category.

The screenshot shows the 'Configure your Recommendations merchandising campaign' interface. At the top, there is a navigation bar with 'Reports', 'Recommendations', 'Mail', 'Triggers', and 'Promote' menus, and an 'Account' button. Below this is a sub-navigation bar with 'Campaigns', 'New campaign', and 'Product sets' tabs. The main heading is 'Configure your Recommendations merchandising campaign' with a 'Create a new campaign' button. A breadcrumb trail shows 'Details' > 'Master rules' > 'Recommendation rules' > 'Exclusions' > 'Activation and preview'. The 'Activation and preview' section is divided into two columns. The left column, 'Date and time', includes a 'Specify when this campaign will run.' section with 'Start' (27/09/2017 17:30) and 'End' (empty) date pickers, and a 'Time zone: Europe/London' dropdown. The right column, 'Advanced options', has 'Select all' and 'Clear selected' links, and a grid of checkboxes for days of the week: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, and Sunday, all of which are checked. Below these is the 'Preview recommendations' section, which contains explanatory text and two search input fields: 'Products viewed:' and 'Category viewed:'. At the bottom right, there are 'Save campaign' and 'Cancel' buttons. A copyright notice '© 2017 Episerver' is visible in the footer.

When a campaign is ready, click **Save campaign** and return to the **Campaigns** tab. New campaigns are inactive by default, so find your campaign and click **Play ▶** to activate it. You can pause/deactivate a campaign in the same way. Changes are applied immediately to your site.

The screenshot shows the Episerver Recommendations management interface. At the top, there is a navigation bar with the Episerver logo and menu items: Reports, Recommendations (highlighted), Mail, Triggers, Promote, and Account. Below this is a sub-navigation bar with Campaigns (highlighted), New campaign, and Product sets. The main heading is "Manage your Recommendations merchandising campaigns" with a "Create a new campaign" button. A table lists three campaigns:

Campaign name	Page type	Widget alias	Start date	End date	Edit - Status - Delete - Copy
Casual trousers	Home page		05-Aug-2017	-	[Edit] [Status] [Delete] [Copy]
Exclude Product	Home page		17-Oct-2017	31-Oct-2017	[Edit] [Status] [Delete] [Copy]
Product Page Promotion	Product page		27-Sep-2017	-	[Edit] [Status] [Delete] [Copy]

A tooltip "Activate it" is shown over the status icon of the "Product Page Promotion" campaign. The footer contains the copyright notice "© 2017 Episerver".

## Product recommendation reports

This topic describes analytic reporting for Episerver Personalization. Analytic reports let you see the success of your campaigns, and which Personalization efforts work or do not work.

The reporting functionality in Episerver Personalization covers a variety of useful information.

Perform users and administrators can track and graphically monitor the following items:

- Total orders, revenue, and products sold
- Order, revenue and products sold through recommendations
- Average order value and units per order uplifts with product recommendations
- Best Performing pages
- Best Performing Widgets

## Attribution Model

The Episerver Perform Attribution model is the industry standard. If a visitor visits your site and clicks on a Perform recommendation, and then returns to the site within 30 days and buys the product they clicked and converted on, then full attribution for the conversion is given to Perform.

## Example

If a visitor engages with a product recommendation, returns to the site and purchases the item, plus other items they were not recommended, Episerver Perform is only attributed the revenue generated from the recommended item and that they engaged with (clicked on) - *not* the entire basket value.

For example: A visitor is recommended a T-shirt for \$5.50 while browsing the site. The visitor clicks on the recommended T-shirt, however they leave the site without purchasing. The visitor returns later that day and purchases 2 of the T-shirts they were recommended and engaged with. They also purchase a jumper for \$14 that they were not recommended. The order total is \$25 and the total revenue attributed to Perform would be \$11 (which is 2 T-shirts at \$5.50 each). If the visitor buys multiple units of the same item that was recommended to them and they clicked on, this collective sum is attributed to Perform. Equally, if it was just one item, the sole value of that one item is attributed to product recommendations.

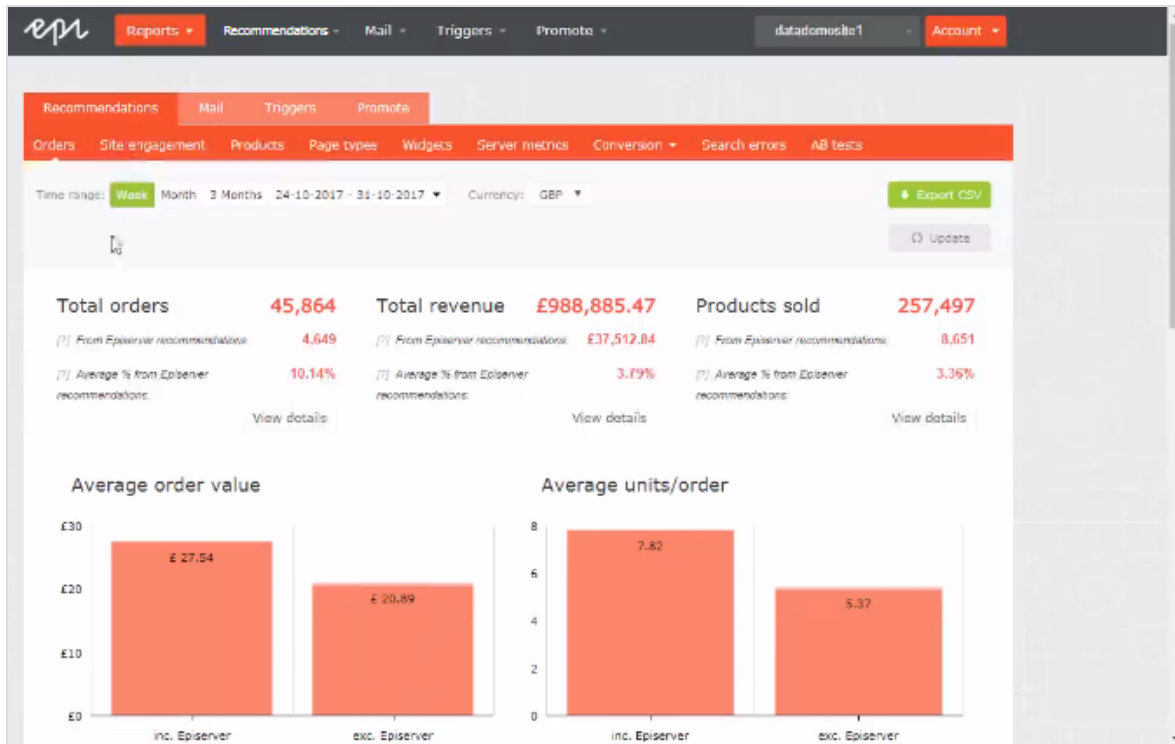

Perform can produce a graph that plots attribution against time. This shows when most people convert after being shown a product recommendation. The metrics used are CPC (click to purchase conversion) against time. On average, 85% of conversions occur within 24 hours.

## Orders tab

The **Orders** tab shows orders from online channels tracked by Episerver Personalization.

From the **Reports** tab, select **Recommendations**, then click on the **Orders** tab.

- **Time range.** At the top of the page you can choose the time range for the reports. **Week** is the default selection, which shows information from the past 7 days. You can also choose **Month**, **3 Months** or a custom time range. When you change the time range, click **Update** to refresh the results.
- **Currency.** Select the currency you would like to report on.
- **Export CSV.** You can export any of the reports you are viewing to a CSV file by clicking **Export CSV**.
- **Total orders.** Shows the total number of transactions tracked on the site as two units of measurement.
  - **Episerver Recommendations.** The number of orders in which an Episerver product recommendation was purchased.
  - **Average percentage from Episerver recommendations.** The percentage of orders in which an Episerver product recommendation was purchased.
- **Total revenue.**
  - **From Episerver recommendations.** Shows the revenue generated from products bought through product recommendations, which is measured by totalling the unit value of products clicked and purchased via recommendations.
  - **Average % from Episerver recommendations.** Shows the percentage of total revenue from Episerver product recommendations.

- **Products sold.** Shows the total number of units sold on the site.
  - **From Episerver recommendations.** Shows the revenue generated from products bought through product recommendations.
  - **Average % from Episerver recommendations.** Shows the average percentage of products sold from Episerver product recommendations.
- **Average order value.** Shows the average value of orders that contained an Episerver product recommendation compared to those that did not over the period.
- **Average units/order.** Shows the average number of units purchased in orders that contained an Episerver product recommendation compared to those that did not.
- **Recommendation revenue from Episerver.** Shows a graphical view of the total revenue from product recommendations (left-hand axis), and % of product recommendation revenue (right-hand axis), with the time period on the base line, to monitor the peaks and troughs in behavior.

- **Orders data table.** Shows revenue and products shown in a table. You can organize orders, revenue, and products sold by the following columns.

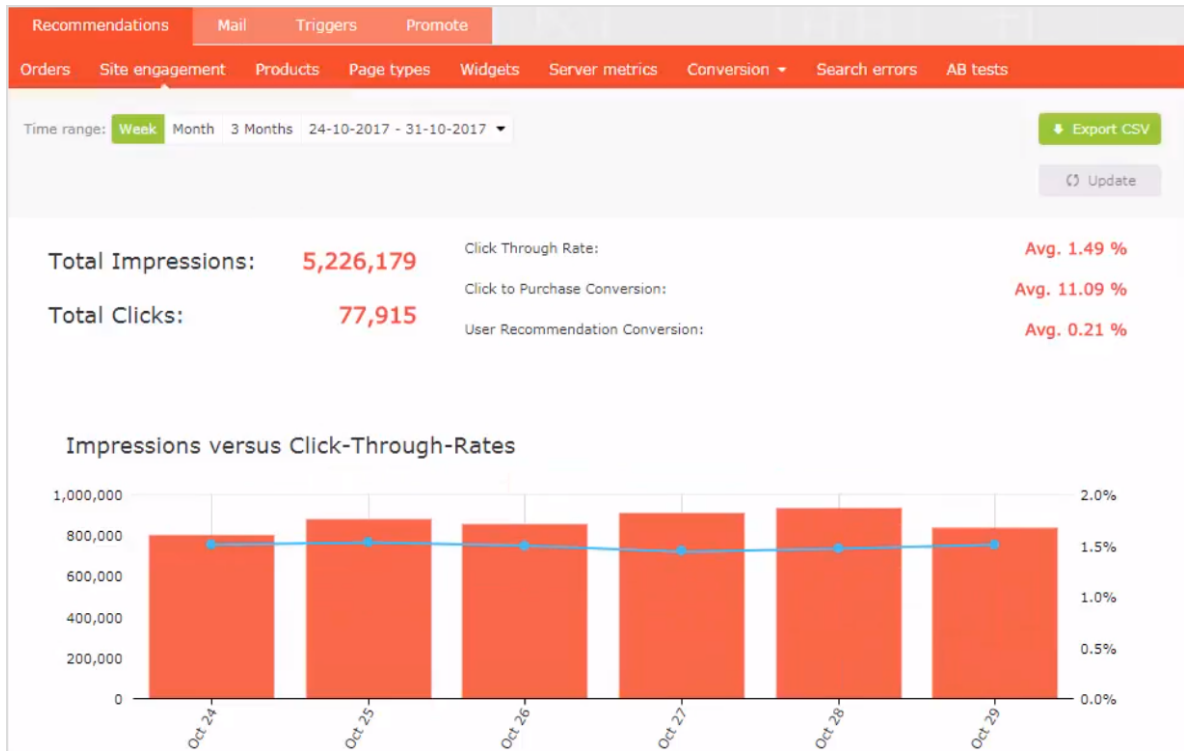

Orders				
Revenue				
Products sold				
<b>Total orders:</b>		From Episerver recommendations:		
45,864		4,649		
		% From Episerver recommendations:		
		10.14 %		
Date ▼	Total ↕	From Episerver recommendations ↕	% From Episerver recommendations ↕	
24-10-2017	6,672	694	10.4 %	
25-10-2017	7,420	800	10.78 %	
26-10-2017	7,486	733	9.79 %	
27-10-2017	8,260	856	10.36 %	
28-10-2017	8,809	858	9.74 %	
29-10-2017	7,217	708	9.81 %	
<b>Total:</b>	<b>45,864</b>	<b>4,649</b>	<b>10.14 %</b>	

- o date
- o total number of tracked transactions, revenue or units sold for that date
- o total number of orders, revenue, or units sold, that contain or were sold through an Episerver product recommendation
- o the percentage of orders or products sold that contain an Episerver product recommendation

## Site engagement tab

The **Site Engagement** tab shows page impressions, clicks, and click-through rates (CTRs) for product recommendations across your site.

- **Total impressions.** Shows the total number of page impressions where product recommendations were served.
- **Total clicks.** Shows the total number of clicks that have occurred on product recommendations.
- **Click through rate.** Shows a percentage and is worked out on the sum of clicks divided by the sum of impressions.
- **Click to purchase conversion.** Shows a percentage, and calculated on the sum of purchased recommended products divided by sum of clicks.
- **User recommendation conversion.** Shows the number of unique visitors who purchased a product recommendation, compared to the number of unique visitors who viewed a product recommendation, again shown as a percentage.
- **Impressions versus click through rates.** Shows a graphical representation of this information. The bars show the daily total number of page impressions with product recommendations, and the line shows the daily click through rate for product recommendations.

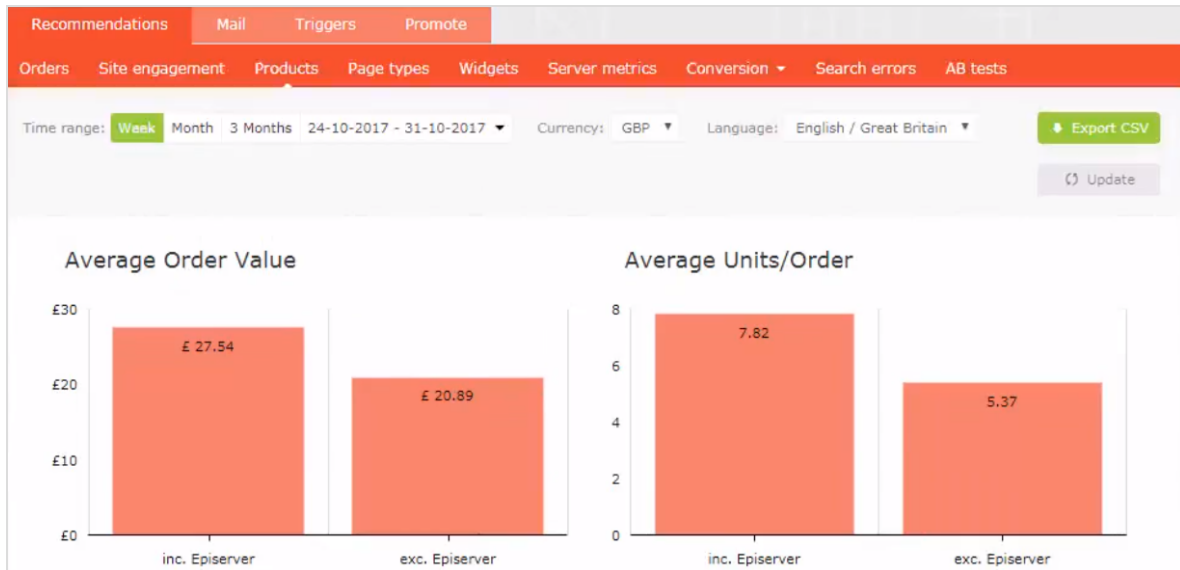

- **Site Engagement data table.** You can organize the data by the following columns.

Date ▾	Impressions ↕	Clicks ↕	CTR ↕	CTP ↕	URC ↕
24-10-2017	804,136	12,124	1.51 %	11.45 %	0.21 %
25-10-2017	877,334	13,393	1.53 %	11.11 %	0.22 %
26-10-2017	858,335	12,875	1.5 %	10.4 %	0.21 %
27-10-2017	909,440	13,057	1.44 %	11.5 %	0.23 %
28-10-2017	936,594	13,795	1.47 %	11.69 %	0.22 %
29-10-2017	840,340	12,671	1.51 %	10.38 %	0.2 %
<b>Total:</b>	<b>5,226,179</b>	<b>77,915</b>	<b>1.49%</b>	<b>Avg. 11.09%</b>	<b>0.21 %</b>

- Date
- Total number of impressions
- Total number of clicks
- Percentage of product recommendations that were clicked
- Percentage of purchased product recommendations after having been clicked on
- Percentage of unique visitors who purchased from product recommendations versus unique visitors who saw product recommendations

## Products tab

The **Products** tab shows the best-selling products on the site based on the revenue generated from product recommendations.

- **Average order value.** Shows the average order value of orders that contained an Episerver product recommendation compared to those that did not over the specified period.
- **Average units/order.** Shows the average number of units purchased in orders that contained an Episerver product recommendation, compared to those that did not, again over the specified period.
- **Revenue from Episerver.** Shows revenue generated from Episerver product recommendations on a daily basis through the time period, providing a visual to see trends in behavior.

- **Best-selling products data table.** The table in the portal shows the top 10 products. However, you can export a full list by clicking **Export CSV**. You can organize the data by the following columns.

<b>Totals:</b>		Total Units Sold:	Recommendation Based Units:	Total Revenue:	Recommendation Based Revenue:
		276,686	9,677	£1,104,421.97	£41,994.51

  

Product Ref.	Title	Total Units Sold	Recommendation Based Units	Total Revenue	Recommendation Based Revenue
654050	Maybelline Age Rewind Eye Concealer Light 6.8ml, Nude	1,045	125	£5,439.58	£667.64
716130	Makeup Revolution Luxury Banana Powder	552	130	£2,505.64	£592.98
726250	Real Techniques Prep & Prime Set	1,755	73	£13,720.33	£570.93
591912	Apotamil 3 Growing Up Milk Powder 900g	701	58	£6,280.64	£521.42
725870	Skinny Tan & Tone Oil	542	30	£8,204.86	£454.92
215469	Oral B Precision Clean Replacement Toothbrush Heads x4	1,764	49	£14,063.83	£390.46
410901	Ghost The Fragrance 150ml Eau de Toilette Spray	230	16	£5,085.94	£354.16
439400	Collection Lasting Perfection Concealer Fair 1, Nude	595	86	£2,403.78	£346.32
716342	I Heart Makeup Unicorn Heart Rainbow Highlighter, Multi	690	67	£3,343.29	£329.19
717535	Skinny Tan Dual Sided Mitt	482	72	£2,086.31	£308.28
<b>Totals</b>		276,686	9,677	£1,104,421.97	£41,994.51

- Product code used to identify the product
- Title of the product
- Total number of units sold on the site
- Number of units purchased through product recommendations
- Total revenue of the product on the site
- Total revenue of the product through product recommendations

## Page Types tab

The **Page Types** tab shows page types on the site where product recommendations are served, and how much product recommendations revenue is generated from each page.

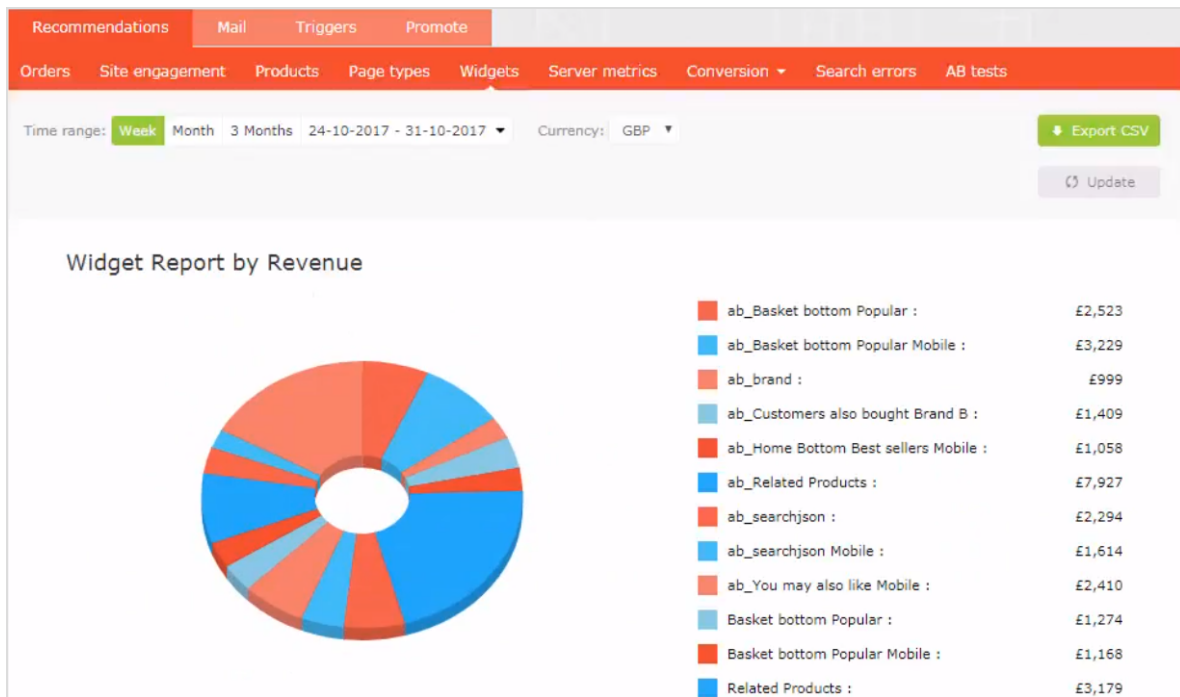

- **Page type report by revenue.** A pie chart shows which page types are generating the most product recommendations revenue.
- **Page Type data table.** You can organize the data by the following columns.

<b>Totals:</b>		Impressions:	Clicks:	Items bought:	Revenue:	
		4,959,221	73,580	8,651	£37,512.84	
Page type	Impressions	Clicks	CTR	Items bought	CTP	Revenue
Basket	659,889	9,253	1.40%	2,314	25.01%	£8,265.20
Brand	42,834	752	1.76%	358	47.61%	£1,311.80
Category	957,380	1,076	0.11%	133	12.36%	£515.85
Favourites	0	0	0.00%	1	0.00%	£3.49
Home	763,631	5,174	0.68%	344	6.65%	£2,047.23
My Account	0	0	0.00%	80	0.00%	£409.76
My Account B	0	0	0.00%	20	0.00%	£97.50
Order Confirmation	39,593	803	2.03%	202	25.16%	£665.84
Product	1,776,982	48,996	2.76%	3,954	8.07%	£18,401.89
search	710,936	7,421	1.04%	1,237	16.67%	£5,752.55
Wish List	7,976	105	1.32%	8	7.62%	£41.73
<b>Totals</b>	4,959,221	73,580	1.48	8,651	11.76	£37,512.84

- Page type names where product recommendations are present
- Number of impressions for that page type
- Number of clicks on product recommendations for that page type
- Click-through rate (CTR) for product recommendations, which is shown as a percentage, calculated by sum of clicks divided by sum of impressions
- Items Bought shows the number of items purchased through product recommendations on that page type
- Click to Purchase (CTP) rate for product recommendations shows a percentage, calculated by sum of purchased recommended products divided by sum of clicks
- Revenue generated from product recommendations on each page type.

## Widgets tab

The widgets reporting page is similar to the Page type report, but with finer detail for individual widgets, because some pages may have more than one widget.

- **Widget report by revenue.** The pie chart presented to visitors shows which widgets are generating the most revenue.
- **Widget data table.** Shows similar information as Page Types, except based at the widget level. Click on a widget name to see the individual position performance details within a widget. You can organize the data by

the following columns.

Widget	Impressions	Position	Clicks	CTR	Items Bought	CTP	Revenue

## Server Metrics tab

The **Server Metrics** tab shows two graphs:

- Number of product recommendations served per day

- Average time it takes to generate product recommendations and return them to a site (that is after a tracking request is sent)

## Conversion tab

The **Conversion** tab shows the ranking of products based on their overall conversion and page views on a site. It does not focus on product recommendations but can provide easily accessible, actionable insights based on your whole site and all visitors and all orders.

Time range: **Week** Month 3 Months 24-10-2017 - 31-10-2017 Currency: GBP Export CSV Update

High converting, high traffic High converting, low traffic Poor converting, high traffic Poor converting, low traffic

High converting, high traffic - Preserve them How are these reports calculated?

Product ref.	Title	[?] Page views	Units bought	Conversion %	[?] Revenue per page View	Revenue

## Conversion definitions

- **High converting.** Any product that is in top 10 of the highest 10% of conversions
- **Low converting.** Any product that is in the lowest 10 of the lowest 10% of conversions.

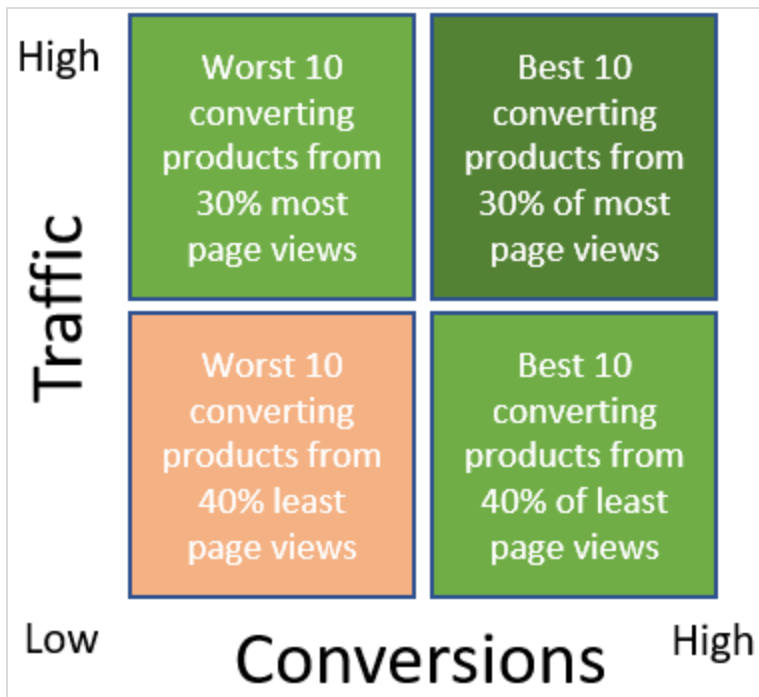

## Traffic definitions

- **High traffic.** Any product that is in the top 30% of page views.
- **Low traffic.** Any product that is in the lower 40% of page views, and with the very lowest 10% excluded.

The following list and image shows the various combination views of conversion data.

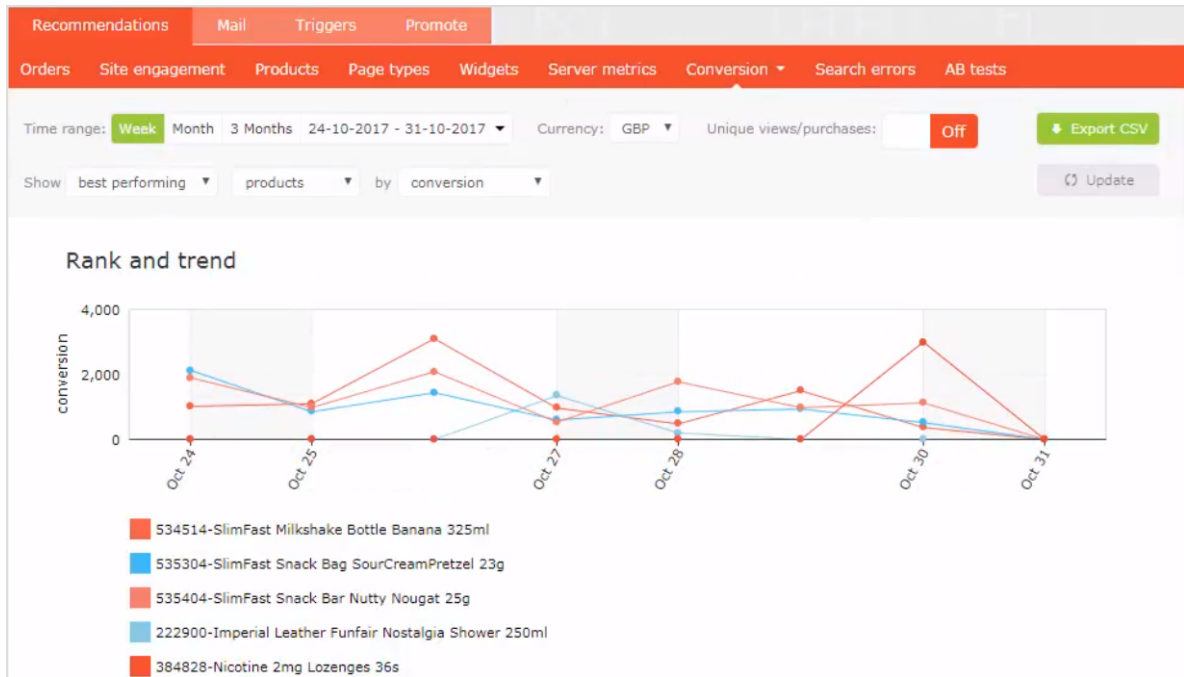

- **High converting, high traffic.** The best 10 best converting products on the site from the top 30% of products with most page views.
- **High converting, low traffic.** The best 10 best converting products on the site from the 40% of products with the least page views, excluding the 10% of products with the lowest number of page views.
- **Low converting, high traffic.** The worst 10 converting products on the site from the top 30% of products with most page views.

- **Low converting, low traffic.** The worst 10 converting products on the site from the 40% of products with the least page views, excluding the 10% of products with the lowest number of page views is displayed.

## Rank and trend view

The **ConversionRank and trend** view lets you generate a *Top 5* report of products, categories or brands sold on your site, based on a combination of criteria – best or worst performing by page views, revenue or conversion. The generated report shows data on the total page views, units bought, conversion, revenue per page view and total revenue from all sales on your whole site.

## Search errors tab

The **Search Errors** tab shows the terms used in a site search that returned no results.

The screenshot shows the 'Search errors' tab in the Episerver Perform Recommendations interface. The time range is set to 'Week' from 24-10-2017 to 31-10-2017. The table below displays search terms and their associated metrics.

Term [?]	Instances [?]	Unique visitors [?]
*** Empty Search Keywords ***	59,035	41,981
search	653	557
red technique	336	284
glitter glue	329	298
roxxsaurus	329	282
hydra genius	305	276
tan eraser	224	209
soap and glory	219	192
nyx	215	195
beauty blender	146	112
milani	137	128
loreal hydra genius	132	118

You can sort by the following criteria:

- The term that was searched
- The number of times a term was searched
- The number of unique visitors who searched for a term

## AB tests tab

The **AB tests** tab shows the results from the latest Perform A/B test on a site, and past tests.

The screenshot shows an AB testing interface with the following elements:

- Navigation tabs: Recommendations, Mail, Triggers, Promote, Orders, Site engagement, Products, Page types, Widgets, Server metrics, Conversion, Search errors, AB tests.
- Filters: Test date range (From: May 17, 2017 - Jun 1, 2017), Control group (A), Currency (GBP).
- Buttons: Export CSV, Update.
- Range bar: 2017-05-16 to 2017-05-31.
- Table tabs: Numbers, Daily charts, Uplift charts, History.
- Table with columns: testA, testB, Var %.

	testA	testB	Var %
Sessions	1413998	1413793	-0.05 %
Unique visitors	1342825	1343363	0.04 %
Revenue (GBP)	1,115,330.48	1,111,860.64	-0.35 %
Orders	51961	52366	0.74 %
Items	300372	305193	1.56 %
Conversion rate	3.87 %	3.90 %	0.73 %
Session conversion	3.67 %	3.70 %	0.92 %
Average order value (GBP)	21.46	21.23	-1.06 %
Revenue per visitor (GBP)	0.83	0.83	-0.28 %

You can do the following in the AB tests view.

- Filter the results to specific dates by selecting the date range from the range bar.
- Set the control group.

**Note:** A/B testing supports up to 5 groups so you can view A-to-E testing.

- Select a specific currency that you want to examine.
- In the table you can view and compare key metrics on the site between all test groups, such as:
  - Visitor sessions
  - Site revenue
  - Conversion rate
  - Average order value through average selling price and units per order
  - Recommendation engagement and revenue

## Daily charts

The **Daily Charts** view shows graphs for revenue generated, average conversion rates, average order value, average selling price, through to average number of units sold and number of sessions per day on the site.

Numbers **Daily charts** Uplift charts History

### Revenue

### Visitor to order conversion

### Average order value

### Average selling price

## Uplift charts

The **Uplift charts** view shows graphs displaying the revenue, conversion and average order uplift value for a chosen test group vs the control group for the selected date range (which is cumulative) and over the past 7 days

Numbers Daily charts Uplift charts History

### Cumulative revenue uplift

Legend: — 7-days - - - Cumulative

A versus B

### Cumulative conversion uplift

A versus B

### Cumulative average-order-value uplift

A versus B

## History tab

The **History** tab shows a list of product recommendation A/B tests conducted on the site.

The screenshot displays the 'History' tab in the Episerver Perform Recommendations interface. At the top, there is a navigation bar with tabs for Recommendations, Mail, Triggers, and Promote. Below this, a secondary navigation bar includes various analytics categories: Orders, Site engagement, Products, Page types, Widgets, Server metrics, Conversion, Search errors, and AB tests. The main content area features several filters: 'Test date range' set to 'From: May 17, 2017 - Jun 1, 2017', 'Control group' set to 'A', and 'Currency' set to 'GBP'. There is also an 'Export CSV' button. A 'Range' selector is shown with a green bar and two date pickers: '2017-05-17' and '2017-06-01'. An 'Update' button is located to the right. Below the filters, there are tabs for 'Numbers', 'Daily charts', 'Uplift charts', and 'History'. The 'History' tab is selected, showing a 'Test configuration' table.

Date	Test A %	Test B %
from 17 May 2017 to 01 Jun 2017	50	50

# Episerver Digital Experience Cloud

The Episerver Digital Experience Cloud™ unifies digital content, commerce and marketing in one platform, including omnichannel solutions for intelligent campaigns. The platform uses artificial intelligence and behavioral analytics to deliver personalized experiences everywhere. With our secure, reliable platform you can quickly increase engagement, revenue and productivity, while getting the fastest time to value.

## About Episerver

At Episerver, we believe digital transformation is a journey. We have been guiding customers for more than 20 years in providing standout digital experiences. Today our network of 880 partners, in 30 countries, supports 8,000 customers and over 30,000 websites. Founded in 1994, Episerver has offices in the US, UK, Sweden, Australia, Germany, Denmark, Finland, Norway, Poland, the Netherlands, Spain, South Africa, Singapore, Vietnam and the UAE.
